## EXPERIENCE

### Comcast

#### Engineer | Philadelphia, PA | June 2018 - Present

- Showcase testing achievements to product owners and technical directors every sprint, highlighting the broad test coverage as well as the 250%-time reduction through automation implementation.
- Executed SOAP and REST API Testing using Postman, and SoapUI.
- Developed new unified framework across all e-commerce platforms for residential consumers. (Java, Jenkins, and Selenium, JavaScript, TestNG)
- Headed QA teams on Automation testing for bi-weekly company releases. (C#, Java)
- Coordinated and directed off-shore team with performance testing and accessibility testing.
- Contracted through Cognizant as a permanent on-site consultant.

### Jed Mahonis Group

#### Developer Intern | Minneapolis, MN | April 2017 – August 2017

- Developed and built a Ruby on Rails application for the quality assurance team from the ground up. (MySQL, Ruby, HTML, CSS, JavaScript)
- Improved and maximized quality assurance time, by developing a web application that generates reports on mobile applications currently being built by the company.
- Spearheaded and launched this application as a remote intern on a one-man team.
- Incorporated slack notifications using Jenkins plugins to send over fast and quick reports to optimize production

### Sportradar

#### Data Entry Specialist | Minneapolis, MN | October 2014 – January 2018

- Monitored up to six live sporting events at one time while collecting raw, accurate data for over 500 clients including NFL, NHL, Google, and Draft Kings to publish on their websites
- Supervised and assisted up to six live data entry field workers internationally simultaneously resulting in accurate data that covers team and individual statistics.
